

Index.html

Este archivo es el esqueleto de la plataforma web. Define qué elementos, botones y contenedores existen en la pantalla. En tu código, divide la interfaz en áreas clave:

- **Cabecera (Header):** Muestra el logotipo, el título "Campus Seguro" , y contadores en vivo sobre cuántos tótems de hardware están conectados y cuántas emergencias hay activas.
- **Contenido Principal:** Está dividido en dos grandes bloques: el espacio donde vivirá el mapa interactivo y un panel lateral derecho (sidebar) que incluye pestañas para ver las alertas "En Vivo", el "Historial", y filtros para buscar incidentes pasados.
- **Ventana de Verificación (Modal):** Es una estructura que normalmente está oculta, pero que salta a la pantalla cuando un tótem dispara una emergencia. Tiene cajas preparadas para mostrar la cámara IP en vivo , la zona del campus , una transcripción de audio de lo que sucede y los botones de acción para que el guardia confirme la emergencia o la marque como falsa alarma.

Styles.css

Es la "pintura y decoración". Toma el esqueleto HTML y lo convierte en un panel de control profesional con un tema oscuro (dark mode), ideal para reducir la fatiga visual en centros de monitoreo.

- **Paleta de colores de estado:** Define variables de color específicas para identificar de inmediato la gravedad de un incidente (Rojo para crítico, Naranja para alto, Amarillo para medio y Verde para una situación controlada).
- **Animaciones de alerta:** Se encarga de captar la atención del guardia mediante efectos visuales, como el parpadeo de los indicadores en vivo (pulse-dot) y un borde intermitente en las tarjetas cuando entra una nueva alerta.
- **Organización del espacio:** Utiliza propiedades de diseño web para asegurar que el mapa, las tarjetas de alerta de los tótems y el visor de cámaras se acomoden de forma ordenada en cualquier tamaño de pantalla sin romperse.

app.js

Este archivo contiene la programación y es el motor de la interfaz. Es el encargado de recibir los datos del hardware físico en el campus y hacer que la pantalla reaccione:

- **Comunicación en tiempo real:** Establece una conexión WebSocket (ws://localhost:3004) para escuchar de forma instantánea el momento en que un tótem detecta una situación.
- **Integración de Cámaras y Mapas:** Inicializa el mapa usando la librería Leaflet para dibujar pines en las coordenadas de los tótems y asocia direcciones IP específicas a las cámaras de ubicaciones físicas particulares (como el "Pasillo" o la "Cancha").
- **Análisis de Palabras Clave:** Analiza las transcripciones de audio capturadas en el lugar y resalta palabras de peligro extremo (como "ayuda", "fuego", "arma") para advertir rápidamente al operador.
- **Gestor de colas:** Si ocurren múltiples incidentes de forma simultánea, el código las guarda en una cola de alertas (colaAlertas) para que el sistema no se sature y el guardia pueda revisar y despachar seguridad una por una sin perder ningún evento.

```
